Advanced tube-tube-sheet
TIG orbital welding system

Welding

TIG Orbital welding

A winning story since 1961

The Beginning

At the end of the 1950s, Domenico Franco Agostino became the Italian representative of Albert Otto, a German manufacturer of tube expanders. In 1961 Franco Agostino's Albert Otto Italiana was founded and in 1972, after purchasing an area of 10,000 square metres in the municipality of Bagnolo Cremasco, Maus Italia Sas was established.

The Growth

In 1976 his son Stefano, a mechanical engineer, joined the company. Together with his father, he studied products, introduced new machinery onto the market and filed the first patents by Maus Italia. Above all, Stefano was firmly convinced that people are the very heart of a company's success. Therefore, he invested in human capital by valuing people and roles, and he surrounded himself with skilled operators as well as technical, commercial and administrative collaborators. The result was a winning, competent and proactive team.

His daughter Anna - also a mechanical engineer - has been working in the company since 2016, giving new impetus and energy to the business her father and grandfather had built.

Father and daughter work together side by side every day to guarantee the excellence of Maus Italia and support all customers worldwide with competence and passion: the company's distinctive traits.

Stefano Agostino

CEO - Mechanical Engineer

Anna Agostino

COO - Mechanical and Management Engineer

In-house production of each component ***Workshop 4.0 and 24/7 production control***

The production of Maus Italia branded items is entirely carried out in Bagnolo Cremasco, in the heart of an Italian industrial area 30 km southeast of Milan.

The company boasts a 4.0 workshop equipped with state-of-the-art machinery, an in-house heat treatment room and a final inspection department that allow Maus Italia to independently manage every phase of the manufacturing process of its wide range of products whilst maintaining high quality standards.

Quality first. ***Design and development***

One of Maus Italia's strengths is its willingness to understand its customers' needs.

Our technical department is always ready to find operational solutions to the most complex applications, even via feasibility studies. We develop accurate work processes, draw with FEM analyses to verify our mechanical-structural performance and optimise the manufacturing process of each component.

Ready To Deliver

A well-stocked and complete warehouse of finished products enables Maus Italia ship quickly to customers all over the world according to a ready-to-deliver logic.

The warehouse is fully located within our premises in Bagnolo Cremasco at controlled temperatures and conditions to guarantee the maximum safety and quality of Maus Italia products for all our customers.

Quality, environment and safety policy

Research, quality and safety are the watchwords of Maus Italia Spa.

Maus Italia has several projects underway aimed at increasingly sustainable development and integrates environmental concerns into its business model. The company's actions, behaviour and development choices are focused not only on the short run but rather mainly on a medium and long-term horizon.

Every day in over ***80 country*** ***worldwide***

Giotto FullControl

Advanced system for a total control of tube-tube-sheet TIG orbital welding

Maus Italia presents the **Giotto FullControl system**, top-of-the-range trolley-mounted semi-automatic systems for heat exchanger tube-tube-sheet orbital welding. In-house design and construction has allowed this product to be optimised, providing a high quality system, composed by:

- A Giotto FC 250 orbital head for tube-tubesheet TIG welding
- Giotto PG 300 programmer/generator with microprocessor inverter complete with cooling unit and touchscreen interface
- Accessories, options and spare parts to meet every need for welding tubes to the tube-sheet

Extremely precise

Revolutionary features

Fixed angle - Electrode incidence setting

Adjustable wire feed unit

Single key adjustments

Continuous recording of the weld

Remote control with display

Protective gas line

Focus features

Electrode angle setup

The electrode holder system with preset angles adapts to any welding geometry and makes setup easy and repeatable.

Adjustments with a single key

All available adjustments for different welding geometries require a single supplied key.

Continuous recording of the weld

All work parameters can be stored on a USB pen drive and printed on board the machine.

Remote control with display

Simple and intuitive interface for control of welding parameters. Comes complete with all manual controls for the welding head.

Sectors

The division into up to 9 sectors of the welding cycle allows compensation for the negative effects of gravity on the welding puddle.

24/7 Usage

The enhanced cooling system inside the head allows intensive use of the system.

Test gas

The operator has the option to check and adjust the flow of the gas to the flowmeter before the start of the welding cycle.

Protective gas line

There is an additional dedicated gas line, inside the body of Giotto FC 250, for the external protection of welding.

Optionals

IWFG Filler wire

Rotating supply unit for the filler wire.

Thrust devices

Mounted on the welding head, these allow welding of flush or protruding tubes and, when necessary, for welding in a protected atmosphere.

Argo clamp

TIG orbital welding head centring and locking system.

TIG Orbital welding

Unique technology for tube-tube-sheet joints

Test X-ray

3/4" Tube 14 BWG
Material 316L
Tube overhang 5 mm (0.197")
Tube-sheet thickness 125 mm (4.92")

Test X-ray

1" Tube 18 BWG
Material 304L
Flush tube
Tube-sheet thickness 72 mm (2.83")

Protruding tube

Flush tube

Recessed tube

a welding thickness

OD external diameter of the pipe

g gap between external tube diameter and tube sheet hole

t tube thickness

t1 thickness of plating

t2 thickness of the tube-sheet

x weld overflow

Giotto FullControl

Advanced tube to tubesheet TIG orbital welding system

Advanced portable product, suitable for complex applications.
Stands out for its reliability, precision, ease of use and robustness.

Reliable

Precise

Ergonomic

Standard supply

- Giotto FC 250** - Orbital head with cables (torch power/ cooling)
- Giotto PG 300** - Trolley-mounted digital programmer generator with inverter
- Remote control with display
- Ground wire
- Digital gauge
- Electrode holder bracket kit with various angles of incidence
- Welding head adjustment and maintenance kit
- Instruction manual
- Carrying case

Optionals

- Argo clamp** - TIG orbital welding head centring and locking system
- IWFG** - Rotating filler wire supply unit
- WTC-FT** - Thrust device for welding flush tubes with BlockOut anti-glare screen
- WTC-PT** - Four-point thrust device for welding protruding (or recessed) tubes
- WTC-GAS2** - Thrust device for welding tubes in a protected atmosphere

Test X-ray

Tube \varnothing 26,7 mm x 2,87 mm (1.051" x 0.113")
ASTM A210 Material
Tube overhang 5 mm (0.197")
Tube-sheet thickness 30 mm (1.181")

Test X-ray

1.3/4" Tube - 10 BWG
Material TP 316 L
Tube overhang 5 mm (0.197")
Tube sheet thickness 30 mm (1.181")

Micrometer adjustment

Device for adjusting the distance of the electrode from the tube-sheet.

Complete range of devices for centring in the tube consisting of HS cartridge spindles and HC self-centring cartridges.

Different WTC thrust devices to be selected on the based of tube geometry and material, with Maus Italia BlockOut screens for anti-dazzle protection.

Single key Adjustable filler wire feed unit

All adjustments are made with a single supplied key.

New electrode tightening system

The tangential screw does not require service keys and speeds up replacement of the worn electrode without touching other parts that could change the geometric setting.

Giotto FC 250

Tube-tube-sheet TIG orbital welding head

The Giotto FC 250 head is the result of extensive development and prototyping. Each component is designed and manufactured by Maus Italia.

In-house production

Electrode angle setup guaranteed

Thanks to components with predetermined angles, the proposed system for each welding geometry is absolute and repeatable. It facilitates geometric setup operations as well as being extremely stable and robust.

Micrometric adjustment

HS Cartridge spindle

Tangential electrode tightening

WTC-PT Thrust device

Speed adjustment

Programming of the peripheral speed of head rotation.

Precise position

Absolute optical control of the angular position using an encoder.

Protective gas line

There is an additional gas line, inside the body of the Giotto **FC 250**, dedicated to the external protection of the weld for combination with the **WTC-Gas2** thrust device.

HC Self-centring cartridge

Welding with the ideal temperature

The effective internal cooling system of the **Giotto FC 250** orbital welding head guarantees:

- control of the internal temperature of the rotating joint even at high welding amperages;
- continuous use in 24/7 shifts;
- high quality of the welding puddle with a lower average temperature of the electrode and the protective gas passing through it;
- significant improvement in welding performance.

Giotto PG 300

Digital programmer/generato with inverter with integrated-control microprocessor and digital interface on monitor

Powerful and compact, Maus Italia's offers the Giotto PG 300 programmer/generator for controlling the TIG Giotto FC 250 orbital welding head to guarantee 100% repeatability. Mounted on "carriage pickUp" with gas bottle holder

Powerful

Compact

Ergonomic

Pre-weld gas control

The operator, using the remote control, has the possibility of checking and adjusting the flow of the gas to the flowmeter before the start of the welding cycle.

Operator panel on color monitors

This is the interface where the working parameters (and setting) of the orbital head are programmed and displayed.

Thanks to the integrated 12.1" monitor, backlit in colors (capacitive touch - screen), parameter programming is extremely fast and simple.

Welding sectors

There is the option to program, using the integrated software, subdivisions of up to 9 sectors of the welding cycle to compensate for the negative effects of gravity on the welding puddle.

Available parameters

- Date and time
- Serial number of the generator
- Serial number of the connected gun
- Operator
- Name of welding program in use
- Angular position of the torch
- Time in seconds from the beginning of the cycle.
- Average current value
- Average voltage value.
- Peripheral speed of the orbital head.
- Speed of the filler wire.
- Applied energy.
- Pre-gas
- Starting current
- Slope times
- Welding puddle formation time
- Welding current
- Base current
- Pulse frequency
- Pulse balancing
- Final current
- Post gas time
- Welding speed
- Amount of filler wire
- Programmable sectors: 1 to 9 plus slopes
- Programmable up- and downslopes
- Program diagnosis simulation cycle
- Continuous recording of heat input (applied energy in kJ)

Dedicated TIG orbital welding programming and diagnostics software

The Giotto FullControl is supplied with dedicated Maus Italia software for intuitive programming of all welding parameters and prompt intervention of complete diagnostics for any malfunctions.

The simulation cycle allows you to try programs stored by the operators in advance (with space available for over 200 programs).

Optional

Maus Italia machines transform you into a Smart Factory!

Compliance of the Giotto FullControl system with the requirements of the "INDUSTRY 4.0" system, has been examined by an accredited Third party and considered suitable to allow interconnection between the machine and company systems.

Parameter monitor

- Clear real-time display of the main welding parameters to allow the operator immediate feedback.

Welding head setup - Ignition

- Fundamental variables to guarantee total repeatability. Facilitate the exchange of correct information between operators.
- Definition of the welding start phase

Welding sectors

- Definition of the number of sectors (1 to 9) and programming of parameters for each sector.
- Control of the arc when shutting down

Shut-down - Reports

- Definition of the final welding phase
- Enabling of welding report production modes

Continuous welding recording

All work parameters can be stored on a USB pen drive and printed on board the machine:

- in "time lapse" (for rotation angle/weld no.)

Remote control with display

Simple and intuitive interface for controlling the welding parameters. Complete with all manual welding head controls as well as:

- start-up
- stop
- test gas
- on/o filler wire selector.

Supplied with 8 m (26 ft) connection cable

Giotto FC 250

Optional components

IWFG filler wire feed unit and WTC thrust devices for the Giotto FC 250 tube-tube-sheet TIG orbital welding head

Rotating filler wire supply unit for wire from \varnothing 0.8 to 1 mm (0.0315" to 0.0394") in 1 kg coils (2.2 lb)

Guarantees regular supply of the wire to the welding puddle. Wire consumption is always in full view of the operator thanks to the transparent protective cloche.

With manual manoeuvring levers for quick adaptation to the tube pitch.

Multiple welders can operate simultaneously on the same tube-sheet to increase productivity.

The protective atmosphere is created by injection of inert gas into the thrust device with the aim of eliminating any contamination

WTC-PT

4-point of contact thrust device for welding protruding tubes

WTC-FT

Thrust device for welding flush or recessed tubes with rotating **BlockOut** anti-dazzle screen

WTC-Gas2

Thrust device for welding tubes in a protected atmosphere

Argo clamp

TIG orbital welding head centring and locking system

Argoclamp ensures centring and precise support of the head to the tube to be welded. Maus Italia, thanks to experience of its already patented products using radial caliper expanding tools, fits this technology directly on the Giotto FC 250 welding head. Argoclamp instantly expands inside the tube to be welded, locking the orbital head. The Argoclamp is powered by the protective gas dedicated to the torch electrode.

Head locking

Disarmed Argoclamp for insertion and removal of the HP self-centering cartridge in the tube to be welded.

Active Argoclamp for centring and locking the head in the tube to be welded.

HP Centring for FC AG 250 welding head

Special centring to support the Argo clamp system (FC AG 250 welding head + PG 300 AG generator)

Special HP centring is interchangeable with the standard centering system consisting of HC cartridges and HS spindles.

	Tube size		Cartridge

	26,5 ÷ 29,0	1.043 ÷ 1.141	HP-17
	28,5 ÷ 31,2	1.122 ÷ 1.220	HP-18

The management system of Argo clamp pneumatic drive take place from the welding gas already present on board.

Argo clamp activation is ergonomically positioned on the welding head.

MAUS
ITALIA

Giotto

mausitalia.it

A photograph of a MAUS Italia welding system in a factory. The system consists of a red vertical column with a white starburst logo and the text 'MAUS ITALIA' on a red panel. A large white circular fan is visible in the background. In the foreground, a black service trolley with a red and black welding torch is positioned. The trolley has a top shelf with various tools and a bottom shelf with a coiled cable.

Accessories

Maus Italia, in order to meet the needs of a market that increasingly seeks quality, efficiency and design, has created a series of accessories to accompany its Giotto welding systems that offer the opportunity to create a modern, flexible and functional working environment.

Giotto Slide Deck

Trolley-mounted deck

Giotto Equipower 20

Equipotential power supply

Giotto Service Trolley

Service trolley

Giotto Slide Deck

Sliding horizontal trolley-mounted deck for welding head support using balancer

With the aim of providing customers with every accessory necessary for tube-tube-sheet TIG orbital welding, Maus Italia has designed the Slide Deck sliding trolley-mounted deck, available in two sizes:

- **Giotto Slide Deck 1800**
- **Giotto Slide Deck 2800**

Supplied in assembly kit, the Slide Deck allows the operator to connect the TPB-3A series balancer (supplied separately).

Improved stability

Less operator fatigue

Dimensions			1800		2800

Slider

The sliding system is designed to give stability and manoeuvrability to the horizontal movement of the welding head in front of the tube-sheet.
 Each Giotto Slide Deck includes a Slider for connecting a TPB-3A balancer (supplied separately) for vertical movement of the welding head.
 There is the option, on request, to install up to 3 Slider (2 optional) for the manoeuvring of 3 Giotto FC 250 welding heads.

TPB-3A

(Optional)

Spring balancer for the support and vertical movement of the welding head with a capacity of 10 to 14 kg (22.0 to 30.8 lb).

Giotto Equipower 20

Balanced potential power supply for the simultaneous use of two welding systems

To promote increased productivity, Maus Italia suggests the simultaneous use of two or more Giotto FullControl systems with the relevant TIG GiottoFC250 orbital heads on the same tube-sheet.

Giotto Equipower 20 is equipped with a three-phase transformer and connection point to balance the power supply to the two connected welding systems.

Giotto Equipower 20 prevents welding systems from interfering each other during production with changes in the electrical network ensuring the right protection to the programmers' electronics.

Protection for electronics on board the machine

Giotto Service Trolley

Service trolley and storage for spare parts

A tidy and well-organised workspace is synonymous with efficiency and good practice. The Giotto Service Trolley allows you to organise the consumable spare parts for Giotto orbital heads and to store all the keys and service accessories.

- Three drawers mounted on telescopic ball rails with centralised front security lock.
- Large thermoplastic work top
- Orbital head support ensuring stability and functionality
- Lower shelf with rubber mat
- Equipped with 4 wheels of Ø 125 mm

EXpandable sector cartridge mod. **HSE**

Self-centring system particularly suitable in tube-tube-sheet welding of boilers for internal diameters greater than 57 mm (2.1/4") and in vertical negative head applications (sugar refinery exchangers) where the support of the orbital welding head is guaranteed by the expansion of the sectors.

The centring of the torch is guaranteed by the spindle + cartridge system. Use the table to select the correct combination of the HS series spindle and the HC series cartridge according to the internal diameter of the tube.
